Table of Contents

It's not tricky to replace the standard About dialog. Simply override the method

```
@Override
public void doAbout(UIActionEvent pEvent) throws Throwable
{
    openContent(this, null, true, "com.sibvisions.apps.demo.DemoAbout",
this);
}
```

in your custom application class. If you don't have a custom application class, simply create one by extending ProjX. The class should be located in the **src.client** folder. Be sure that you change your launcher files and the deployment descriptor (replace ProjX with your application class).

Your *DemoAbout* class should extend the ProjX' *About* class:

DemoAbout.java

```
public class DemoAbout extends About
{
    public DemoAbout(IWorkScreenApplication pApplication)
    {
        super(pApplication);
    }

    @Override
    protected void init()
    {
        super.init();

        IWorkScreenApplication app = getApplication();

        UIPanel panLicense = new UIPanel();
        ...

        getTabsetPanel().add(panLicense, "License");

        UIButton butClear = new UIButton("Clear");
        butClear.setBorderOnMouseEntered(true);
        butClear.eventAction().addListener(this, "doClear");
        butClear.setFocusable(false);

        UIPanel panButtons = getButtonPanel();

        UIFormLayout flButtons = (UIFormLayout)panButtons.getLayout();

        panButtons.add(butChangeLicense,
flButtons.getLeftAlignedConstraints(0, 0));
    }

    public void doClear()
    {
```

```
            //Custom code
        }
}
```

Our custom About dialog adds a new Tabset and a Clear Button in the bottom area.
