Build script

Requirements

Flutter version 2.5.2 is required.

The build script requires Node.js. Simply check versions:

```
node -v  
npm -v
```

Download and install Node.js: <https://nodejs.org/en/>

Run `npm install` to install all depending npm packages.

(Windows only) Add the full path of `flutterclient/node_modules/.bin/` to `%PATH%` variables.

Commands

The results can be found in **deploy** directory.

Web

```
flutter doctor -v  
flutter config --enable-web
```

Start build

```
npm run buildweb
```

Android

```
npm run buildandroid
```

iOS

```
npm run buildios
```

Build number

```
npm run increasebuildnumber
```

Manual

Web

```
flutter doctor -v  
flutter config --enable-web
```

Run the web variant:

```
flutter run -d chrome
```

Build the release:

```
flutter build web
```

The result can be found in **build/web** directory.
