

Table of Contents

It's possible to show big images if you single-tap on an image. In tap mode, it's possible to zoom in and out. If you don't like this feature, use the style: `f_enlarge_disabled`.

We also have an [image editor](#) built-in. The editor is disabled by default. If you need this feature, add the style: `f_editor_enabled` and a double tap on the image will open the image editor.
