

Table of Contents

JVx supports the integration of diagrams platform-independently.

Example

Inserting a diagram into an existing layout:

```
UIChart chart = new UIChart();

chart.setTitle("Chart Test");
chart.setXAxisTitle("Values");
chart.setYAxisTitle("Count");
chart.setChartStyle(UIChart.STYLE_LINES);

chart.setDataBook(rdbContacts);
chart.setXColumnName("ID");
chart.setYColumnNames(new String[] {"ID", "SALU_ID"});

add(chart);
```

The chart component can be used just like a simple UIPanel.

For example, the results could look as follows:
