Table of Contents

If you need a popup menu for your table on right mouse click, simple add it. A short example:

```
UIMenu menActions = new UIMenu("Actions");

UIMenuItem miInsert = new UIMenuItem("Insert");
UIMenuItem miDelete = new UIMenuItem("Delete");

menActions.add(miInsert);
menActions.add(miDelete);

UIMenuItem  miSearch = new UIMenuItem("Show");
miSearch.setImage(UIImage.getImage(UIImage.SEARCH_SMALL));

UIPopupMenu popupMenu = new UIPopupMenu();
popupMenu.add(menActions);
popupMenu.addSeparator();
popupMenu.add(miSearch);
```

You should add a mouse event for your component to show the popup (you also could add the event to an image or a panel):

```
tblMaster.eventMousePressed().addListener(this, "doShowPopup");
```

and the listener method:

```
public void doShowPopup(UIMouseEvent pEvent)
{
    if (pEvent.isPopupTrigger() )
    {
        popupMenu.show(pEvent.getSource(), pEvent.getX(), pEvent.getY());
    }
}
```
