We want JVx to become **THE OpenSource Java Framework** for the development of **multi tier database applications**. In addition, it should remain manageable und should not be dependent on other frameworks.

JVx Capabilities

- Easy development of database applications without having to mix different frameworks
- Business logic only has to be created once, and can then be used with various client technologies (Android, iPhone, Ajax, .NET, ...)
- Interchangeable GUI technologies (Swing, SWT, Ajax, Silverlight, ...)
- GUI + business logic + database access are united on one framework
- Minimal maintenance effort for applications
- Expansion of existing applications should be fun

Areas of Cooperation

- Development at the JVx Core API
- Implementing JVx UIs
- Researching new technology
- Developing new components, modifying/improving existing components
- Documentation
- Creating sample applications
- Promotion (written reports, presentations, etc.)
- Translations

Skills

Software Development (Java, Android, Objective-C, iPhone/iPad, C#/.NET, Flex), Software Testing, Languages, Writing, Presenting
