

Table of Contents

The standard login is really standard.

It's great for standard ERP systems, but custom ERP systems need a custom view:

To change the login view, simply use an [external css](#) file and set following styles:

```
.jvx #glasspane-login,  
.jvx_valo #glasspane-login  
{  
    background-image: url("images/login_background.jpg");  
    background-size: cover;  
}  
  
.jvx .loginwindow .v-window-contents,  
.jvx_valo .loginwindow .v-window-contents  
{  
    background: transparent;  
}  
  
.jvx .loginwindow,  
.jvx_valo .loginwindow  
{  
    opacity: 0.75;  
    background: #efefef;  
}
```
