Table of Contents

Some of your screens contain comboboxes:

But it's not clear how to add items to a combobox!

You should know that all comboboxes use tables for loading items. It's easy to create a new screen for a table, so you should create a screen for the table of your combobox, e.g.,

To do this, create a new screen (1)

and use the New Screen Wizard (2). Select the data source **Use existing data from database tables** (1).

for the **Application User** (1).

Finally, choose the existing table (1).

The new screen allows you to add your items for the combobox, and the combobox itself will show all available items (1).
