2025/12/13 22:38 1/1 Check if Workflow is Running

If you want to know if a workflow is still running, you have different options. If you want to check the running state in your workscreen, simply call

```
boolean running = Workflow.isRunning(this, id);
```

The id is the object that was returned from:

```
Object id = Workflow.start(this, worfklowNameOrId);
```

×

On server-side, the call is different:

```
WorkflowAccess.getCurrentInstance().isWorkflowRunning(id);
```
